RE: COVID-19 Virus

Dear Parents and/or Guardians,

As many of you saw, the Governor issued a State Of Emergency today. This allows our state government to get access to additional federal and state resources. I want to take this opportunity to share information concerning LASD and the COVID-19 virus.

I have held a number of meetings with Bent County Public Health and the Colorado Department of Education (CDE) to discuss the required components of a tentative plan(s) in the event there is a case(s) within our region, county and city.

We are taking a number of basic steps now to keep our schools safe. We are promoting frequent hand washing for adults and students. Additionally, we have a strong cleaning regiment for desks, tables, countertops and restrooms. Also, we are strongly encouraging sick adults and children to stay home and monitor their symptoms.

The District will follow the recommendations of Bent County Public Health (BCPH) in the event of an identified case. Colorado Department of Education strongly advises Districts to follow local, regional and state public health agency guidelines. Ultimately, the Colorado Department of Public Health has the statutory responsibility to set in motion plans to protect local communities and schools. This same governance is granted to county level public health entities- Bent County Public Health.

I have been working closely with BCPH as the COVID-19 virus continues to spread in Colorado. Though I am not able to share a specific plan at this time, I do need parents/guardians to know that a school closure is a key component of the plan. The duration of that plan would be dependent on the circumstance surrounding the case.

Our main task will be to support BCPH, our families and students, our community, and our region in the work to limit the spread of this dangerous virus. If you have more questions or concerns please contact Ms. Goines at 719-456-0161.

Sincerely,

Elsie D. Goines

Coronavirus Disease 2019

COVID-19

Facts for Coloradans | March 6, 2020

Colorado now has cases of COVID-19.

Colorado state and local public health agencies are working to limit and slow potential spread of this disease, and all Coloradans can help. We advise you to stay informed with reliable sources of information, take everyday actions to protect yourself and those you love, and share accurate information with neighbors, friends and co-workers, especially people who may have difficulty receiving or understanding the information.

Stay informed

Take everyday actions to protect yourself and those you love

There are effective ways to reduce the risk yourself and the people you care about.

- Practice excellent hygiene
 - Frequently and thoroughly wash your hands with soap and water for at least 20 seconds. If soap and water are not available, use hand sanitizer with at least 60% alcohol.
 - Cover coughs and sneezes with a tissue, then throw the tissue in the trash, or use your inner elbow or sleeve.
 - Avoid touching your eyes, nose, and mouth with unwashed hands
 - Stay home if you're sick, and keep your children home if they are sick.
 - Clean items in your home
- Be calm and prepared

Things to remember

- It is normal to be scared, distressed or angry when you hear about a disease outbreak, even when you are at a low risk of getting sick. Be careful not to turn fear and anger towards people who have become sick. Ask yourself:
 - Would you think or do the same thing if this was a different infectious disease, like the flu?
 - Does what I'm doing make people safer or does it create more fear or harm?
- The risk of COVID-19 is not at all connected with race, ethnicity, or nationality. Blaming others will not help fight the illness. Seeking and sharing accurate information will.

How COVID-19 spreads

The disease most likely spreads the same way as similar respiratory illnesses.

- Person-to-person contact:
 - To become sick, you have to be exposed to the virus. CDC defines exposure as being within 6 feet (2 meters) of someone with a confirmed infection for a prolonged period of time.
 - Exposure can occur through respiratory droplets -- when an infected person coughs or sneezes, similar to how flu and other respiratory viruses spread.
- Infected surfaces or objects:
 - It may be possible to get COVID-19 by touching a surface or object that has the virus on it and then touching your mouth, nose, or possibly your eyes.
- For these reasons, people at increased risk of infection are:
 - People who have been to areas where widespread community transmission is occurring.
 - People who had direct close contact with someone who has COVID-19.

Symptoms and severity

- Symptoms of COVID-19 include fever, cough, and shortness of breath.
- Illness can be severe and require hospitalization, but most individuals recover by resting, drinking plenty of liquids, and taking pain and fever-reducing medications.

If you are sick

It is important to call ahead before going to see a doctor or emergency room to prevent the spread of illness. Tell them your symptoms and that you suspect you were exposed to someone with COVID-19 or had recent travel to a country that is experiencing community spread.
